

302 / 1.4310 / UNS30200

Grade 302 stainless steel is another austenitic steel type. It is very tough and also features superior corrosion and dust resistivity. It is no-magnetic and cannot be hardened with heat treatment.

However, you can cold work it to increase the hardness. Most commonly used in its annealed form, the 302 steel is excellent for formability and fabrication.

Material Data Sheet

Material Designation/Name	DIN 1.4310
UNS	UNS S30200
DIN	DIN 1.4310

Main application of 1.4319

- Food and beverage application. Trailer bodies.
- Different pressure-containing applications.
- Cryogenic and sanitary applications.

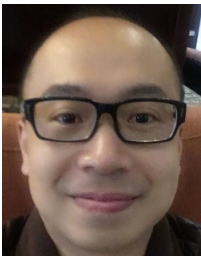

Chemical composition of 1.4319

C	0.15
Cr	17-19
Si	1.0
Ni	8.0-10.0
Mn	2.0
Sulfur, S	0.03
Phosphorous, P	0.045

Delivery status and forms

Various sizes and tolerances available upon your request.
